MEI-SHAN RESERVOIR DAM — Shanghai, Kung-oh'ang Chien-she, Dec 55, Front Cover

The major projects for the control of the Huai Ho during 1955 were the Mei-shan Reservoir, the Kan-wan Reservoir, and the Ki-ho-wa flood retention project.

Mei-shan Reservoir is on the upper reaches of the Shih Ho, a tributary of the Huai Ho. It can retain 2.1 billion cubic meters of water, generate 24,000 kilowatts of electricity, and irrigate 640,000 mou of land. Its hollow, reinforced concrete connected arch dam is 538 meters long, 84 meters high, and made up of 16 separate arches. The water conduit is 259 meters long, and there is also a spillway with a closure gate. During the flood season this year, though the dam was not completed, it retained 150 million cubic

meters of flood water. The reservoir project is advancing rapidly now, and

and 61 wooden "passage-way" bridges and places of subsidiary construction. The earth and stone work for the main irrigation canal extends 11 kilometers. This construction work solves the problem of water conservation that has historically been in hopeless confusion in both the upper and lower reaches of the slope]. This irrigation canal and dam will assure increased crop production, with single cropping changed to double cropping on more than 3,000 mu of cultivated fields.

A RETENTION DAM WITH CASCADE SPILLWAY -- Shanghai, Kuang-c eng

Chien-shu, 15 Jul 55, p 2

The cascade spillway of the retention dam of the Pao-kai River, Hunan, was completed in May, 1955. Besides holding back flood waters, this dam makes possible the irrigation of about 10,000 mou of cultivated fields. The dam is a wedge-shaped gravity spillway dam. The catwalk above the spillway is 20.6 meters above the base of the dam, while the crest of the water is 16 meters above the base of the dam. The embankment is 61.6 meters wide and the spillway extends lengthwise for 15.7 meters. The sluiceway at the base of the dam is 1.85 meters high and 1.5 meters wide and there is also a submerged water-gate

1.5 meters square, to flush out the dam. The fill-in of the dam was made with 1:2:9 proportion of cement, lime, and grout. The face of the dam was constructed with concrete blocks of grade 110, while the spillway was constructed with concrete blocks of grade 170 and with 1:1:6 proportion of cement, lime, and grout. The crest (pi-tan) of the dam was constructed with blocks of stone laid with a 1:3 mixture of cement and grout. Above the spillway a wooden catwalk was constructed for convenience in opening and closing the water-gates.

Tractor-drawn Plow in Kiangsu Province -- Peiping, Chugoku Gaho, 5 Dec 56

*Caption:* It has been proven recently by agronomists that red dirt land, which had been wasteland for hundreds and thousands of years, originally had been arable.

*Description:* Photo of a man on a tractor plowing a field.

Photo No 258731
